Summary

Full-Stack Developer with 3+ years of professional experience shipping end-to-end features in **React**, **Node.js**, and **TypeScript**, from data modeling and API design through deployment. Comfortable owning technical decisions on architecture and tooling, integrating third-party services, and maintaining quality through code reviews and CI/CD. Thrives in small, fast-moving teams working closely with product and design. Based in Montreal and fluent in English and French.

Technical Skills

Languages: TypeScript, JavaScript, Python, SQL, Java, C++, C#, Swift, Kotlin
Frontend: React, Vue.js, Angular
Backend: Node.js, Express, REST APIs, GraphQL, WebSockets, Django, Java Spring
Data: PostgreSQL, Redis, Firebase, Airflow
DevOps & Tooling: Docker, Docker Compose, CI/CD (GitLab, Concourse), Heroku, AWS, Google Cloud, Sentry, PostHog, Git

Work Experience

- **Ludex Labs - Financial Tech & Analytics** — Montreal, QC
  Software Engineer — *Sept 2025 - Present*
  - **End-to-End Feature Delivery**: Architected and shipped a high-concurrency platform with **React**, **Node.js**, and **TypeScript**, handling real-time asset movements and reconciliation updates backed by **PostgreSQL**, **Redis**, and **GraphQL**.
  - **Code Quality & CI/CD**: Ran a rigorous CI/CD workflow combining peer and AI-assisted code reviews, auditing automated feedback with a human-first approach to protect architecture, security, and long-term maintainability.
  - **Observability & Product Analytics**: Implemented end-to-end monitoring with **Sentry** for real-time error tracking and **PostHog** for product analytics, using the data to improve system reliability and user retention.
  - **Containerization & Deployment**: Used **Docker Compose** to keep local and production environments in parity and deployed to **Heroku**, streamlining release workflows for high-stakes interactive modules.

- **Travelink - Travel Advisory Platform** — Montreal, QC
  Co-Founder & CTO (Part-time) — *June 2025 - Present*
  - **Product Launch**: Led technical development of a platform connecting travelers with local advisors, from initial architecture to public release on the **App Store**. travelnk.com
  - **Backend & Real-Time Messaging**: Built a **Node.js** REST API backed by **PostgreSQL** and implemented real-time traveler–advisor chat using **WebSockets**.
  - **iOS Development**: Built the native iOS client in **Swift** with an **MVVM** architecture, cleanly separating UI, business logic, and data layers.
  - **Technical Leadership**: Owned all technical decisions across architecture, infrastructure, tooling, and deployment; shaped the product roadmap and user experience with the co-founders.

Available on AppStore

- **Aro Inc** Montreal, QC
  Software Engineer *Nov 2023 - Sept 2025*
  - **Full-Stack Development**: Architected and built a money transaction application with a **Vue.js** frontend and **Python Django** backend, deployed to an on-premise production server.
  - **Financial Integrations & Data**: Engineered complex **SQL** queries supporting legal compliance with financial institutions including Wealthsimple, PayPal, and Interac.
  - **Pipeline Automation**: Designed **Airflow** pipelines for bank transaction postings and wrote Python ETL scripts to streamline data workflows.
  - **Team Collaboration**: Led version control and issue tracking in **GitLab** for a fast-paced team.
- **Optim-Structure Inc** Montreal, QC
  Full Stack Developer - Contract *Aug 2023 - Nov 2023*
  - **Full-Stack Platform**: Developed a platform with an **Angular** frontend and **Node.js** backend, connecting web and mobile clients through RESTful APIs.
  - **Mobile Development**: Built an Android application in **C#** to monitor factory operational data, with push notifications for real-time server alerts.
- **Desjardins** Montreal, QC
  Software Engineer Intern *May 2022 - Aug 2022*
  - **Enterprise Web Application**: Implemented **Angular** components and **Java Spring** services for the Desjardins Enterprise financial reimbursement platform.
  - **CI/CD & Agile**: Modernized project pipelines with Concourse and worked in daily scrums within a team of 10 developers.
- **Jasmine Conseil Canada** Montreal, QC
  Software Engineer Intern *May 2021 - Aug 2021*
  - **E-Learning Platform**: Designed and built an e-learning platform with an **Angular** frontend and RESTful APIs for course and student data using **Node.js**, **Express**, and **PostgreSQL**.
  - **Developer Tools**: Engineered a containerized online compiler with **Docker** that securely executes Java, C++, and Python code.
- **Polytechnique Montreal** Montreal, QC
  Teaching Assistant - Object-Oriented C++ and Databases *Sep 2022 - May 2023*
  - **Instruction**: Tutored 60+ students in advanced C++ and database management; designed hands-on labs and supplementary materials.

Projects

- **Akrenim Event Platform**: Built a full-stack e-commerce platform for music events with secure ticket purchasing on a **serverless** architecture (Google Cloud Functions). akrenim.ca
- **OnlyDraw - Collaborative Drawing Platform**: Designed real-time canvas synchronization with **WebSockets** and Firebase across web and mobile clients.
- **Janga Ball - Balance Ball Pro**: Released a physics-based Android game on the Google Play Store using **Unity3D** and **C#**, with custom 3D models made in Blender.

 Available on Google Play Store

Education

- **Polytechnique Montreal** Montreal, QC
  B.Eng. in Software Engineering, Concentration in AI and Data Science *Sep 2019 - Apr 2023*
  - **Relevant Coursework**: Object-Oriented Programming (C++), Data Structures & Algorithms, Database Systems
